

CLAIMS

1-6. (cancelled)

7. (previously presented) An in-ear earphone comprising:
a first and a second support element with a predeterminable fixed spacing therebetween;
said first support element being in the form of an electroacoustic transducer; and
said spacing between the first and second support elements being such that the second support element is anchorable in a concha of a wearer of the in-ear earphone.

8. (previously presented) An earphone as set forth in claim 7 wherein the second support element is biased with respect to the first support element.

9. (previously presented) An earphone as set forth in claim 7 wherein the second support element is of an interchangeable nature.

10. (withdrawn) A band-less headphone comprising:
at least two electroacoustic transducers; and
at least one connecting element associated with each electroacoustic transducer for connection to corresponding connecting elements of other electroacoustic transducers.

11. (withdrawn) A headphone as set forth in claim 10 wherein the connecting elements are in the form of magnets.

12. (withdrawn) An earclip headphone comprising:
an electroacoustic transducer;
at least one loop for hooking engagement on an ear; and
an ear pad which is adapted to acoustically sealingly couple to an auditory canal.
